

DSA Precheck Approved

M Bar C Construction gets approval on the first of many DSA pre-checks.

We are proud to announce that our submission in response to the updated DSA (Division of State Architect) pre-check compliance has been approved. This pre-check approval means that DSA projects are permitted quicker and more efficiently.

In 2017 M Bar C Construction produced over 82 megawatts of solar canopies of which over half were DSA approved structures. The DSA oversees construction projects on California K-12 campuses by providing plan review and approval, and construction oversight of projects, in response to applications from California school and community college districts.

The pre-check program provides for DSA approval of the design of a structure in advance of submittal for construction. Through the years, M Bar C Construction has been proud to produce Division of State Architect (DSA) approved solar shade structures for schools throughout California.

In August 2018, all previously approved DSA pre-checks expired and were required to be updated in conformance to the new 2016 California Building Code. M Bar C Construction is proud to have received approval on the first of **many** DSA pre-check approvals. Stay tuned for future pre-check approval news.
